AMORPHOUS SILICON FILM WITH WIDE BAND (54) FORMATION OF

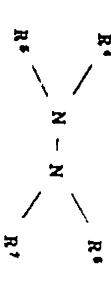

(57) Abstract:

method by adding a specified amount chemical vapor deposition (CVD) manufacture of an a-Si film by a of ammonia (deriv.) to a gaseous satisfactory control efficiency in the amorphous silicon (a-Si) film with starting material. PURPOSE: To form the titled

deposit an a-Si film on the substrate. represented by formula III (where n is substrate is placed in a decomposition each or R1WR7 is H, alkyl or aryl. A formula II is used. In the formulae represented by formula I and/or silane] to form an a-Si film with amount of silicon in the gaseous hydrazine (deriv.), and Si is the relation represented by formula IV the silane by an amount satisfying and/or hydrazine (deriv.) is added to At this time, said ammonia (deriv.) decomposed at about 250W600°C to nitrogen, and the silane is thermally together with an inert gas such as furnace, silane of higher order hydrazine (deriv.) represented by CONSTITUTION: Ammonia (deriv.) about 1.6W2.5eV band gap. the ammonia (deriv.) and/or [where N is the amount of nitrogen in introduced into the furnace optionally 2) such as disilane or trisilane is
